

# Food Processing

Food processing plants require unique solutions. Preventing worker fatigue on conveyor lines and a clean, safe environment are primary considerations. Ultra's fiberglass platforms, staircases, guardrail and machine access step-ups or walkovers can keep processes moving efficiently and comply with USDA guidelines. Slip resistant grating is used for consistent washed or wet areas to avoid slip hazards. Sealed fiberglass is used to prevent bacteria growth and comply with USDA requirements.

Let Ultra Fiberglass Systems design and build the solution to meet your requirements. Quality craftsmanship and attention to detail go into every job. Contact us today to quote your next project.
